

ATLAS PIPES AND SCAFFOLDING PVT. LTD.

CRAFTING EXCELLENCE.

- ✓ Over 30 Years of Industry Experience
- ✓ 4,500 MT Annual Production Capacity
- ✓ Advanced Manufacturing Technology
- ✓ Strict Quality Control
- ✓ Timely Deliveries
- ✓ Customized Solutions
- ✓ Dedicated Customer Support

OUR VISION

India's most trusted manufacturer of scaffolding system and construction support solution by continuously delivery innovative, safe and Quality Products.

OUR MISSION

Deliver superior quality products.

Maintain the highest standards of safety and manufacturing.

Build long-term customer relationships.

Continuously innovate through technology and engineering excellence.

Create value for customers through reliable products and outstanding service.

30

Years of Experience

Made in INDIA

Certified Manufacturer

ABOUT ATLAS AND PIPES SCAFFOLDING PVT. LTD.

Atlas Pipes and Scaffolding Pvt. Ltd. combines manufacturing excellence with engineering expertise to provide comprehensive scaffolding and formwork solutions for residential, commercial, industrial, and infrastructure projects. Every product is manufactured using premium-grade raw materials, advanced fabrication techniques, and rigorous quality inspections to ensure maximum safety, durability, and performance.

MISSION

We are committed to delivering superior-quality products through safe manufacturing, engineering excellence and continuous innovation. By providing reliable solutions and exceptional service, we build lasting customer relationships and create long-term value.

Manufacturing Excellence

Modern Manufacturing Plant

State-of-the-art infrastructure with advanced machinery.

Mig Fabrication

Precision cutting & accurate fabrication for superior quality

Strict Quality Control

Multi-level inspection & advanced testing at every stage.

Timely Dispatch

Efficient logistics network ensuring on-time delivery pan India.

Bulk Production Capacity

High production capability to handle large and urgent project requirements.

WHY TO CHOOSE ATLAS ?

1

Premium Quality

Manufactured using certified raw materials & modern engineering processes.

2

Industry Experience

Over 30 years of expertise in scaffolding and construction products

3

Modern Infrastructure

Equipped with advanced production, testing, and fabrication facilities

4

Timely Delivery

Strong manufacturing capacity ensures consistent supply & on-time deliveries.

5

Competitive Pricing

High-quality products at economical prices.

6

Customer-Centric Approach

Dedicated technical support with complete customer satisfaction.

Our Commitment

At Atlas Pipes and Scaffolding Pvt. Ltd., we are committed to delivering products that combine safety, quality, durability, and value. Our experienced engineering team, skilled workforce, and customer-focused approach enable us to consistently exceed client expectations while maintaining the highest manufacturing standards. We believe in building long-term partnerships through trust, quality, and exceptional service.

OUR PRODUCTS

ATLAS PIPES AND
SCAFFOLDING PVT. LTD.

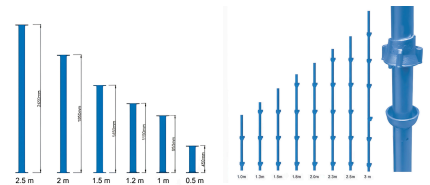

Telescopic Props / Adjustable Props

We offer a wide range of these products which are distinguished by their long-life, high resistant to wear and tear and best-in-class specifications. These props are ideal for use in applications requiring adjustable perpendicular load bearing. Props consist of an outer – made from an NB 50mm MS 'B' Class Pipe – and an inner – made from an NB 40mm MS 'B' Class Pipe.

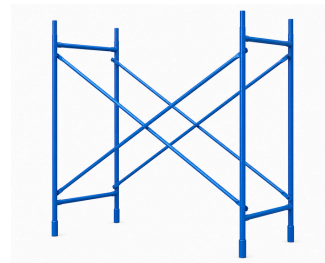

Cuplock System (Ledger & Vertical)

Cuplocks are used both as high load carriers and façade scaffolding. These are typically used in heavy laying and taller building constructions. We offer Cuplock Verticals and Cuplock Horizontals/Ledgers that are durable, easy to install and eco-friendly. Cuplock Horizontals/Ledgers are made from an NB 40mm 'B' Class Pipe. Cuplock verticals are made from an NB 40mm MS 'B' Class Pipe made with a malleable cast iron top cup and bottom cup.

H Frame

We offer H Frame Systems of impeccable quality. We provide H Frame Systems of different specifications and also customise them to meet the exact details required by our clients. All our products comply with the defined parameters of diligence. H Frame Ladder types consist of a main structure – made from an NB 40mm MS 'B' Class Pipe – with an NB 20mm 'B' Class Pipe ladder structure.

Adjustable Span / Acro Span

Our high-quality Telescopic Spans are user friendly, low maintenance and have simple yet vigorous design. These products are manufactured as per industry defined quality standards. Adjustable Spans are CO₂ MIG welded and made from 2mm thick HR Sheet and 8mm MS Rod.

OUR PRODUCTS

ATLAS PIPES AND
SCAFFOLDING PVT. LTD.

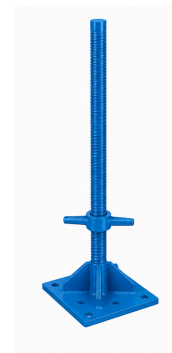

Adjustable U Head Jack

We use superior quality material and high-end technology to manufacture these products. These products are available in varied sizes and are preferred by our clients owing to their durability and long-lasting nature. Adjustable U Jacks are made from a 32 OD Solid Rod that is hydraulically threaded; the top is CO₂ MIG welded with a 75x75x125x6mm U Jack.

Adjustable Base Jack

We manufacture an array of high-quality Adjustable Base Plates. Available in fine finishes these products also enjoy optimal strength and high durability and ruggedness.

Spigot Pin

We manufacture a wide array of Spigot Pin using latest technology and superior raw material. These products are sturdy, corrosion resistant, have high dimension accuracy and long-lasting. We offer them in specific as well as customised specifications. These are made from 38 OD MS Round Hollow 'B' Class Pipes with holes on both ends.

Jalli/ Plank/ Platform

We offer superior quality Walkway Planks that are user-friendly and facilitate high mobility. We cater to the diverse needs of our clients and provide these products in multiple specifications. Our products enjoy sturdiness, corrosion resistance and are perfect in dimension. These are available in widths of 300mm and 400mm and lengths of 1.0m, 1.5m, 1.8m, 2m, 2.5m and 3m.

Centering Plates

Mild Steel Centering Plates or Shuttering Plates, commonly used in construction, are robust and versatile tools designed to support the concrete slabs, beams, and columns during casting. Fabricated from high-quality mild steel, these plates are known for their durability, resistance to wear, and ability to withstand considerable weight and pressure. Typically rectangular or square in shape, they come in various sizes to accommodate different construction requirements. Their surfaces are often coated or painted to prevent corrosion, extending their lifespan. Easy to install and dismantle, these centering plates ensure safety and efficiency on construction sites by maintaining the structural integrity of the formwork until the concrete achieves sufficient strength.

Steel Column Box

A Steel Shuttering Column Box is a type of formwork used in the construction industry for molding concrete into structural columns. Constructed from high-quality steel, these shuttering boxes provide a strong, durable mold that can withstand the pressures of wet concrete without deforming. Designed for ease of assembly and disassembly, these modular units can be adjusted to various sizes and shapes, accommodating different project requirements. The use of steel ensures a smooth surface finish on the concrete columns, contributing to both the aesthetic and structural quality of the finished construction. Steel Shuttering Column Boxes are reusable, making them a cost-effective and environmentally friendly option for constructing vertical supports in buildings, bridges, and other infrastructures..

Steel Round Column Box

A Steel Round Column Box is a cylindrical formwork used in construction to shape and support circular concrete columns. Made from high-quality steel, these boxes are designed to withstand the pressure of wet concrete while maintaining a perfect round shape, ensuring structural integrity and aesthetic appeal of the columns. The robustness of steel allows these formwork systems to be reused multiple times, making them cost-effective and environmentally friendly. Steel Round Column Boxes are typically sectional and can be easily assembled and disassembled on-site, allowing for efficient construction processes. They are commonly used in building pillars, bridge supports, and other cylindrical structures, providing a smooth, clean finish to the concrete surfaces.
